

true_type

```
nlohmann::detail::is_constructible_array_type_impl< BasicJsonType, ConstructibleArrayType, enable_if_t< std::is_same< ConstructibleArrayType, typename BasicJsonType::value_type >::value > >
```

The diagram illustrates a C++ template specialization. A box at the top contains the text `true_type`. A blue arrow points from a larger box below to this box. The larger box contains a C++ code snippet representing a specialization of `is_constructible_array_type` for `BasicJsonType` and `ConstructibleArrayType` when they are the same type.
