

nanort::BVHAccel< vertex
_t >::ListNodeIntersections

nanort::BVHAccel< vertex
_t >::Traverse

nanort::IntersectRayAABB

```
graph LR; A[nanort::BVHAccel< vertex_t >::ListNodeIntersections] --> C[nanort::IntersectRayAABB]; B[nanort::BVHAccel< vertex_t >::Traverse] --> C;
```

The diagram illustrates a relationship between three C++ functions. On the left, two white rectangular boxes are stacked vertically. The top box contains the text 'nanort::BVHAccel< vertex_t >::ListNodeIntersections' and the bottom box contains 'nanort::BVHAccel< vertex_t >::Traverse'. On the right, a single gray rectangular box contains the text 'nanort::IntersectRayAABB'. Two blue arrows originate from the right side of the top and bottom white boxes, pointing towards the left side of the gray box, indicating that both functions on the left are related to or perhaps call the function on the right.
