

nanort::IntersectRayAABB
< double >

nanort::IntersectRayAABB
< float >

nanort::safemax

```
graph LR; A[nanort::IntersectRayAABB< double >] --> C[nanort::safemax]; B[nanort::IntersectRayAABB< float >] --> C;
```

The diagram illustrates a common variable 'nanort::safemax' being referenced by two different function templates. The first template is 'nanort::IntersectRayAABB' with a double precision parameter, and the second is 'nanort::IntersectRayAABB' with a float precision parameter. Both templates have blue arrows pointing to the 'nanort::safemax' variable, which is shown in a gray box on the right.
