

nanort::IntersectRayAABB
< double >

nanort::IntersectRayAABB
< float >

nanort::safemin

```
graph LR; A[nanort::IntersectRayAABB< double >] --> C[nanort::safemin]; B[nanort::IntersectRayAABB< float >] --> C;
```

The diagram illustrates a relationship between two function templates and a common variable. On the left, there are two white rectangular boxes. The top box contains the text 'nanort::IntersectRayAABB' followed by '< double >' on the next line. The bottom box contains the text 'nanort::IntersectRayAABB' followed by '< float >' on the next line. On the right, there is a gray rectangular box containing the text 'nanort::safemin'. Two blue arrows originate from the right side of the two white boxes and point towards the left side of the gray box, indicating that both function templates interact with or depend on the 'nanort::safemin' variable.
